ABOUT THE COLLEGE

Founded in 1999, the College of Public Health continues the University of Iowa's proud tradition of public health teaching, research, and service that dates to 1885. The College of Public Health includes five academic departments: biostatistics; community and behavioral health; epidemiology; health management and policy; and occupational and environmental health.

The College of Public Health is a comprehensive public health resource for Iowa, the Midwest region, the United States, and the world. Among the nation's top-ranked public health schools and programs, the college places a special emphasis on rural public health concerns, including agricultural safety and health, cancer, community-based prevention, environmental health, and health care. Students have extensive educational opportunities spanning undergraduate and graduate programs, as well as an array of experiential learning options within the college's robust research enterprise, in practice settings, and through global travel. Graduates find careers in diverse fields, including frontline public health agencies at the local, state, and federal levels; nonprofit agencies; academia; and private sector positions in health care, pharmaceutical, environmental, and other industries. Public health's interdisciplinary educational approach also provides excellent preparation for work and further study in areas such as medicine, pharmacy, dentistry, nursing, social work, policy, law, or business.
